

# PolarPlex™ CRAC Extension

## Product Information Sheet

### Increase Delta-T Across CRAC Units

PolarPlex™ CRAC Extensions help isolate hot and cold air in the data center, further improving cooling efficiency. CRAC Extensions are now a standard practice for increasing the Delta-T across cooling units by taking in warmer return air from a higher elevation in the room or from a ceiling return plenum. The PolarPlex™ CRAC Extensions are available for most brands of CRAC/CRAH units and are made to order.

### Product Details

PolarPlex™ CRAC Extensions are constructed of sheet steel and powder-coat painted either gray or cream color. There are models for Liebert, Airflow, and other brands. There is an access door option for CRAC units that need top access for filter changes. The CRAC Extensions are easy to assemble and ship flat.
