

PolarFlex™ Blanking Panels

42U, 45U and 48U heights now available in All White, All Black and Custom Art

PolarFlex is rack blanking for empty racks and large unfilled spaces. Data centers often house rows of racks that remain unpopulated for some time, and with high-density IT equipment, some racks will be only partially filled. For empty or partially filled racks, thin and flat PolarFlex blanking panels are a convenient and cost effective alternative to buying, installing and storing hundreds of 1U or 2U molded plastic rack blanks. With new All White, All Black and Custom Art options, PolarFlex panels complement the aesthetic of any data center. Panels are easily trimmed with scissors, so as empty racks become filled they can be perfectly re-sized to accommodate new IT gear. Made of UL-94-VO fire-rated Lexan film. Panels packed in boxes of 10 ea. Rivets and screws packed in bags of 50 ea.
