The 15 Minute CRAC Extension

Flat-Pack Saves Time and Money

The Flat-Pack CRAC Extensions are part of Polargy's innovative Flat-Pack Family of prefabricated, light weight airflow solutions. The Flat-Pack Family incorporates light weight structural panels that are field fastened together with unique, proprietary connectors. This prefabricated design approach minimizes material costs and saves installation labor.

CRAC Extensions Increase Delta-T

Flat-Pack CRAC Extensions help isolate hot and cold air in the data center, further improving cooling efficiency. These are fast becoming a standard practice for increasing the Delta-T across cooling units. The extensions, or hoods, take in warmer return air from a higher elevation in the room or from a ceiling return plenum.

Product Details

CRAC Extensions are built to size for the specific CRAC unit model and height needs. Extension heights can be up to 72". There is an optional sliding window for filter access. A typical 36" tall model weights about 40 pounds.
