## **Polargy Integrated Ceiling System**

### **Standard Slot Structural Ceiling Grid System**

#### **Polargy Integrated Ceiling System**

The PICS™ Standard Slot structural ceiling is an ideal solution for integrating the structural support for the data center's cabling, power, containment, lighting and ceiling tiles. The System has the load carrying capacity and adaptability for making connections at any location in the ceiling. With a continuous support slot along the bottom of the grid, a PICS™ structural ceiling provides ease and flexibility in the white space layout. And, its simple design makes it economical and easy to install.

#### **Benefits and Details**

- 4' x 6' support rod spacing requires 1/3 less ladder time which improves safety and reduces field labor.
- Bottom plate connectors are inherently stronger and require 50% fewer bolts for assembly.
- System is supported from the building structure/roof with rods spaced at 4' x 6' reducing the number of threaded rods by 33%.
- Option to deploy at a 4' x 4' spacing for high capacity requirements.
- All extrusions have a continuous 3/8-16 threaded slot for connecting and suspending at any location along the extrusion.
- Aluminum with clear anodized finish.
