

# Highlight™ Visual Temperature Monitor

WE KEEP  
THE CLOUD  
COOL™

## Temperature Monitor Light

The innovative Highlight™ provides perfect peace of mind at a glance. It changes color to let you know at once whether the temperature of a rack or the room is too high or just right, helping you maintain a safe operating environment. This visual monitoring solution lets operators quickly “see” a problem spot.

## Easy Environmental Monitoring

The indicator light is green when temperatures are good, yellow when its getting too hot, and red when it is too hot. Temperature thresholds for changing color can be user configured and are preset to common industry thresholds. A digital LED readout shows the exact temperature.

## Simple and Fast to Deploy

The Highlight™ is stand alone unit and specifically not integrated to the network so it can be easily deployed. The unit is powered with a simple USB adaptor and up to 10 units can be daisy-chained to a single power outlet.
