

PolarDam™ Air Dam Foam

Flexible and Fire Safe

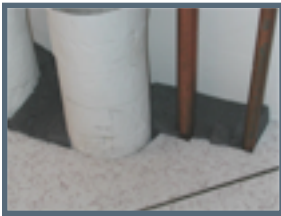

Easily Makes Any Size or Shape

Fully Seals Difficult Cutouts

An easy and flexible way to seal cable cutouts and other floor penetrations at a fraction of the cost of competing solutions.

Energy Efficient

PolarDAM™ Air Dam Foam is a versatile tool that maximizes cold air containment by keeping cooling air where it belongs.

The Right Size

Polargy's PolarDAM™ Air Dam Foam is self-forming to any area where it is inserted and blocks cold air from escaping into open spaces. The foam sheets are scored into a "tear-to-size" perforated 1" x 1" grid so it can be easily separated along the perforations to make any size or shape needed.

Data Center Safe

The PolarDAM™ Air Dam Foam is fire retardant, meets the UL-94-HF-1 rating, and has stable physical properties so it retains its integrity over time.

Part # PD24

PolarDAM™ Air Dam Foam sheets are 24" x 24" x 2" inches tall and each box contains six sheets, or 24 square feet of foam.
