## Air Dam Foam

WE KEEP  
THE CLOUD  
COOL™

### Fire-Safe Air Dam Foam

PolarDam™ improves air conditioning efficiency and reduces energy cost by preventing cold air bypass and recirculation. It is an easy and flexible way to seal cable cutouts and other floor penetrations at a fraction of the cost of competing solutions. PolarDam™ is a flexible, resilient foam that conforms to any space to stop cold air from escaping. It is UL-94-HF-1 rated fire-resistant, chemical resistant and retains its integrity for years.

### Right Size

Polargy's PolarDam™ Air Dam Foam is self-forming to any area where it is inserted and blocks cold air from escaping into open spaces. The foam sheets are scored into a "tear-to-size" perforated 1" x 1" grid so it can be easily separated along the perforations to make any size or shape needed.

### Part# PD24

PolarDam™ Air Dam Foam sheets are 24" x 24" wide x 2" inches tall and each box contains six sheets, or 24 square feet of foam.
