

PolarPlex™ PX Sliding Door

Aluminum, Auto-Closing Containment Door

The PolarPlex PX Sliding Door is an attractive door with auto-close and hold-open features. Its efficient design makes installation quick and easy.

Lightweight for Easy Install

Anodized Aluminum

Single Sided Version

Elegant, Efficient Design

This PX Sliding Door uses a gravity incline design which provides a smooth, consistent close. The width of the dual door is 54" in order to fit most four foot aisles. The door panel insert options are clear, 8mm twin-wall, and FM4910. The door panel frames and support legs are an attractive anodized aluminum. A reversible, single sided version is also available.

Fast and Easy to Install

From box to operating in less than an hour, the PX door was designed for fast and easy installation. Only four bolts are required to assemble the frame and only four connections, two to the floor and two to the racks, are required to mount the frame. After sliding the doors onto the tracks, install the two end bumpers and the two end caps, attach the handles, and it's done.
